

Find the degree and radian measure of the angle in standard position formed by rotating the terminal side by the given amount. Leave radian measures in terms of π .

1. $\frac{2}{3}$ of a circle $\frac{2}{3}(360)$
Radians $\frac{4}{3}\pi$ $240^\circ \left(\frac{\pi}{180^\circ}\right)$
Degrees 240°

2. $\frac{7}{6}$ of a circle $\frac{7}{6}(360)$
Radians $\frac{7}{3}\pi$ $420^\circ \left(\frac{\pi}{180^\circ}\right)$
Degrees 420°

Convert each angle to decimal degree form. Round to three decimal places. You must show all work.

3. $85^\circ 18' 30'' = \frac{85.308^\circ}{\frac{60}{3600}}$

4. $54^\circ 45' = \frac{54.750^\circ}{60}$

5. $-408^\circ 16' 20'' = \frac{-408.272^\circ}{\frac{60}{3600}}$

6. $2^\circ 2' 10'' = \frac{2.036^\circ}{\frac{60}{3600}}$

DON'T PUT (-) IN CALC!
IT WILL SUCK ANSWER!

Convert each angle measure to D°M'S" form. You must show work.

7. $-345.12^\circ = \underline{-345^\circ 7' 12''}$
 $.12(60) = 7.2$
 $.2(60) = 12$

8. $3.794^\circ = \underline{3^\circ 47' 38''}$
 $.794(60) = 47.64$
 $.64(60) = 38.4$

9. $3.58^\circ = \underline{3^\circ 34' 48''}$
 $.58(60) = 34.8$
 $.8(60) = 48$

Find the complement of the given angle. Leave answer in terms of π .

10. $\frac{\pi}{12}$ $\frac{5\pi}{12}$

Complement
adds to 90° or $\frac{\pi}{2}$

Draw the given angles. Show direction and label the terminal side. $7 \cdot \frac{180}{\pi} = 401^\circ$

11. 123°

12. $\frac{17\pi}{12} = 1\frac{5}{12}\pi$

13. 7 radians

14. -310°

Name the quadrant in which or the axis on which the terminal side of the given angle would be located. Draw the angle labeling the direction.

15. 800°

16. $-\frac{31\pi}{6} = 5\frac{1}{6}\pi$

Find the following. Show all your work.

17. A circle has a radius of 4 inches. Find the length of the arc intercepted by an angle of 240° . $\frac{16}{3}\pi$ in or 16.755 in

$S = r\theta$
 $S = 4(240)\frac{\pi}{180}$

18. A sprinkler on a golf course is set to spray water over a distance of 70 feet and rotates through an angle of 120° . Find the area of the fairway watered by the sprinkler. Round to the nearest square foot.

$A = \frac{1}{2}r^2\theta$
 $\frac{1}{2}(70)^2(120)\frac{\pi}{180}$

18. 5131 ft²

19. Find the degree measure of the angle θ of a sector in a circle whose diameter is 150 cm and an arc length of 360 cm.

$S = r\theta$
 $360 = 75\theta$
 $4.8 = \theta$
 $4.8\left(\frac{180}{\pi}\right)$

$r = 75$

19. 275.020°

20. The second hand of a clock is 5 cm long. How far does it travel in 2 minutes and 15 seconds? 70.686 cm

$S = r\theta$
 $= 5\left(\frac{9\pi}{2}\right)$

$4\pi + \frac{\pi}{2} = \frac{9\pi}{2} = \theta$

Linear Velocity - need to take out radius to get AV

21. Hans rides a vehicle with large tires of radius 16 inches at 24 miles per hour.

a) Find the angular velocity of a tire in radians per minute.

$$\frac{24 \text{ mi}}{\text{hr}} \cdot \frac{1 \text{ hr}}{60 \text{ min}} \cdot \frac{1 \text{ rad}}{16 \text{ in}} \cdot \frac{12 \text{ in}}{1 \text{ ft}} \cdot \frac{5280 \text{ ft}}{\text{mi}} = \frac{1584 \text{ rad/min}}{\text{min}}$$

b) How many revolutions per minute does the tire make?

$$\frac{1584 \text{ rad}}{\text{min}} \bigg| \frac{1 \text{ rev}}{2\pi \text{ rad}} = \frac{252.101 \text{ rev}}{\text{min}}$$

22. Determine the angular velocity of the tip of the second hand of a clock in radians per second.

$$\frac{1 \text{ rev}}{60 \text{ sec}} \bigg| \frac{2\pi \text{ rad}}{1 \text{ rev}} = \frac{\text{rad}}{\text{sec}}$$

22. .105 rad/sec

23. A Ferris wheel with a diameter of 250 feet makes one rotation every 45 seconds. Determine the linear velocity in feet per minute of a car on the rim of the wheel. ? makes no grammatical sense whoopsie!

$$\frac{1 \text{ rev}}{45 \text{ sec}} \bigg| \frac{60 \text{ sec}}{1 \text{ min}} \bigg| \frac{125 \text{ ft}}{1 \text{ rad}} \bigg| \frac{2\pi \text{ rad}}{1 \text{ rev}} = \frac{\text{ft}}{\text{min}}$$

23. 1047.198 ft/min

24. A toy racing car is traveling around a circular racing track that is 3.2 m in diameter. Its linear velocity is 0.5 m/sec, What is its angular velocity in rev/min?

$$\frac{0.5 \text{ m}}{\text{sec}} \bigg| \frac{60 \text{ sec}}{1 \text{ min}} \bigg| \frac{1 \text{ rad}}{1.6 \text{ m}} \bigg| \frac{1 \text{ rev}}{2\pi \text{ rad}} = \frac{\text{rev}}{\text{min}}$$

24. 2.984 rev/min

25. In the diagram to the right Gear 1 and Gear 3 share the same axle. Gear 1 is driven by Gear 2. Which two gears have the same angular velocity and which two have the same linear velocity?

Same Angular Velocity 1 & 3 Same linear velocity 1 & 2

ANSWERS

1. radians; $\frac{4\pi}{3}$ degrees: 240° 2. radians: $\frac{7\pi}{5}$ degrees: 420° 3. 85.308° 4. 54.750° 5. -408.272°
 6. 2.036° 7. -345° 7' 12" 8. 3° 47' 38" 9. 3° 34' 48" 10. $\frac{5\pi}{12}$ 11. QII 12. QIII
 13. QI 14. QI 15. QI 16. QII 17. 16.755 18. 5131 ft² 19. 275.020° 20. 70.686 cm
 21. 1584 rad/min 22. .105 rev/min 23. 1047.198 ft/min 24. 2.984 rev/min 25. Same AV-gear 1 and 3, Same LV- Gear 1 and 2

b, 252.101 rad
